```

Pred. No. ST the number of results predicted by chance to have

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

GENERAL INFORMATION:
APPLICANT: Wayne, Jay
APPLICANT: X1, Shuang-yong
TITLE OF INVENTION: Method For Construction Of Thermus-E. coli Shuttle
TITLE OF INVENTION: Wethod For Construction of Two Thermus Plasmid
TITLE OF INVENTION: Replication origins
FILE REPERENCE: Thermus Shuttle Vector
CURRENT APPLICATION NUMBER: US/09/134,246B
CURRENT FILING DATE: 1998-08-14
NUMBER OF SED ID NOS: 30
SOFTWARE: Patentin Ver. 2.0
SOFTWARE: Patentin Ver. 2.0
SOFTWARE: DNA
ORGANISM: Thermus sp.
                                                                                                                                                                                                                                                                                                                                                                                    δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 В

Mu elements insert preferentially into transcription units. For more information on RescueMu, go to the web site 'www.zmdb.iastate.edu' and follow the links for 'RescueMu.' Grid G was grown at Stanford in 2000. DNA was extracted from leaf punches, double digested using BamHI and BgIII, and ligated to form circular plasmids. DH10B cells were transformed and then screened on LB plates with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Konno, H., Aizawa, K.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   , Akahira, S., Akiyama, J., Arakawa, T.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Carninci

                                                                                                                                                                                                                            (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi14732114|gb1AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into

This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpC-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert CC cytosine (C) but not methylated C, to uracil, then part of the genomic CC DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one CC member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the CC label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory contemps etc., particularly by detecting mutations or single nucleotide CC polymorphisms (SNP's), and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously.

CC method for determining the degree of cytosine methylation described in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δõ
                    This invention describes a novel method for determining the degree of commethylation of a particular cytosine in a motif 5'-Cp0-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one cand the degree of hybridisation to both classes is determined from the call and the degree of hybridisation to both classes is determined from the classes of oligomers, the degree of methylation is calculated. The method is used: (1) for diagnosis and/or prognosis of side effects of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the method for determining the degree of cytosine methylation described in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                  Determining the degree of cytosine methylation in genomic DNA, for diagnosis and prognosis, comprises selective hybridization amplicons from chemically treated DNA -

This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5'CQG-3', present in a genomic sample of DNA. The sample is treated themically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The metho is used: (1) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorder of the central nervous, cardiovascular, gastrointestinal and respiratory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       01-SEP-2001; 2001WO-EP10074.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; cytosine methylation; 5'-CpG-3'; uracil; cytosine; diagnosis; drug; side effect; cancer; central nervous system; cardiovascular; gastrointestinal; respiratory system; single nucleotide polymorphism;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides a number of human immune system associate genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alpheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis, and inflammatory/ulcerative bowel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1;

This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpC-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert CC cytosine (C) but not methylated C, to uracil. then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. CC The amplicon is hybridised to two classes, each with at least one member, of oligonuclectides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the CC label on the amplicon. From the ratio of labels hybridised to the two CC classes of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory cystems etc., particularly by detecting mutations or single nucleotide CC polymorphisms (SNP's); and (ii) for differentiation. The method allows the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              VΩ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) camino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with happropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) considered the nucleic acids into a host cell and culturing the cell to express the protein: (I) proteins and polynucleotides may be used to prove the secreted (I), by inserting the culturing the cell to express the considerations and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK84942 to AAK8490 and AAM82169 crepresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                              Ϋ́
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               amino acid sequences given in AAM92170 to AAM91921. (I) have cytostatic contivity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, and diagnose and treat immune/haematopoietic related diseases, especially cancers and cancer metastases of haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK87694 represent human immune/haematopoietic antigen genomic sequences received related in the average to the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is a DNA encoding human Caspase-8 also known as CA MACH, FILCE and Wch5. Caspases are a family of cysteine proteases, that compared in the initiation and execution of apoptosis. Caspases exist as pro-enzymes, activated by cleavage into a large and small subunit. Coccurring after specific aspartic acid residues within the pro-enzyme sequence. The present invention relates to a method for functional coloning of genes encoding proteins or enzymes involved in proteolytic cleavage. The invention is based on the use of caspase expression cassettes comprising the coding sequence of a proteolytic cleavage site flanked by sequences encoding two caspase subunits. A fusion polypeptide comprising a first and a second caspase subunit, separated by a cleavage comprising a first and a second caspase subunit, separated by a cleavage comprising a first and a second caspase subunit, separated by a cleavage comprising a first and a second caspase subunit, separated by a cleavage comprising fusion polypeptide is used to identify a mutant cell line deficient in an enzyme of interest and is also useful for diagnosis and containing fusion of a polypeptide (e.g. Cathepsin B or urokinase, coloninase, along the suced in caspase of a tumour cell characterised by overexpression of a polypeptide (e.g. Cathepsin B or urokinase, along the suced in caspase in the tumour cells). DNA encoding fusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         expresses an mRNA and protein product. The promoter Region 1 sequence is located upstream (5') to exon 1, which is the alternatively-spliced 5' untranslated region (UTR) that is less commonly used. The promoter Region 2 sequence is located downstream (3') of exon 1 and upstream of exon 2, which is the more commonly used 5' UTR. The CASPB gene has been localized to human chromosome 2933-34. The methods are used to diagnose or prognose cancer. Cancer is treated by administering a vector that expresses a gene encoding functional CASPB in only a vector that is diagnosed or treated is a tumour in which a myc gene is amplified, such as a neuroblastoma. Aggressive neuroblastoma, juvenile neuroblastoma (preferred), small-cell lung carcinoma, non-small-cell lung carcinoma, colorectal carcinoma, or uterine cervical carcinoma can be diagnosed with the new method. A kit for screening for a compound that induces
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Inactivation of a caspase-8 (CASP8) gene is determined by detecting a modification of CASP8 genomic DNA that results in inactivation of the gene. CASP8, a cysteine protease, is part of the death inducing signaling complex (DISC) associated with the Fas receptor. CASP8 is inactivated in cancers, and plays a role of a tumour suppressor gene. The CASP8 promoter region sequences, in particular Region 1 and Region 2, are crucial to the design and execution of the genomic methylation PCR analysis of CASP8 gene inactivation. Methylation PCR can be used to examine even minute amounts of patient material to demonsrate whether the CASP8 gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Detecting inactivation of a caspase-8 (CASP8) gene for diagnosing or prognosing cancer, comprises detecting a modification of genomic DNA comprising the CASP8 gene that results in inactivation of the gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC isoforms of MACH. MACH is a binding protein for the mediator of receptor CC toxicity (MORP-1) protein. MORT-1 binds to the FAS ligand receptor CC (FAS-R) death domain region, and triggers part of the cell death CC signalling cascade in mammalian cells. Vectors containing these CC sequences, the encoded proteins, and antibodies (Ab) against them are CC sequences, the encoded proteins, and antibodies (Ab) against them are CC used to modulate the effect of FAS-R ligand or TNF on cells that carry CC FAS-R or p55-R. This is specifically for treating tumours, HIV infected CC cells or other diseased cells, by control of apoptosis/programmed cell CC death. The encoded proteins are mediators of the cell death pathway CC initiated by TNF and FAS-R binding, i.e. it mimics or enhances the CC effect of MORT-1 where increased cytotoxicity is required. To inhibit the CC care hepatitis, sequences encoding antisense molecules or ribozymes, or CA bagainst the protein, are used. Compounds that inhibit MACH are Optentially useful for controlling MACH activity e.g. in cases of autoimmune disease, oligodendrocyte death in multiple sclerosis or CC ADS-inhibited T-cell suicide. The MACH proteins can also be used to isolate and characterise other proteins and receptors involved in CC signalling and for Ab production. The Ab can be used to purify the new CC proteins and for diagnosis of conditions involving abnormal function of CC CAS-R mediated cellular effects
                                                                                                                                                                                                                                                                                                                                                                     Query Match

CC analyzed using methylation sensitive PCR analysis. Amplification of the CC 5' untranslated region (UTR) of the Casp8 gene was performed in reaction CC mixtures containing bisulfite treated DNA. Primers AAA51818-23 were CC designed to produce a 320 bp fragment in the upstream region of Casp8 CC gene extending from nucleotides +221 to +541. Wild type primers were CC used to amplify the corresponding region of untreated genomic DNA. CC Controls without DNA were also performed. CASP8, a cysteine protease, is CC part of the death inducing signaling complex (DISC) associated with the CC particular Region 1 and Region 2, are crucial to the design and execution CC of the genomic methylation PCR analysis of CASP8 gene inactivation. CC Methylation PCR can be used to examine even minute amounts of partient material to demonstrate whether the CASP8 gene expresses an mRNA and CC protein product. The CASP8 gene has been localized to human chromosome CC 433-34. The methods are used to diagnose or prognose cancer. Cancer is treated by administering a vector that expresses a gene encoding CC functional CASP8 in cells. The cancer that is diagnosed or treated is a tumour in which a myc gene is amplified, such as a neuroblastoma. CC Aggressive neurobastoma, juvenile neuroblastoma (preferred), small-cell lung carcinoma, colorectal carcinoma, or uterine cervical carcinoma can be diagnosed with the new method. A kit for screening for a compound that induces death-receptor-mediated

```
messenger RNAs that populate a (sub-)transcriptome, where the cc (sub-)transcriptome comprises messenger RNAs transcribed from multiple ct transcription units that populate a genome. The library comprises cc several oligonucleotides, each capable of hybridising selectively to a cc the genome, which encodes one or more messenger RNAs plice variants. Cc The oligonucleotide libraries are useful for detecting mRNAs from a cc biological sample, in expression profiling studies, in qualitatively or quantitatively characterising the corresponding transcriptome, and in cc detecting RNA transcripts and splice variants of human or animal cc libraries to detect transcripts of a sub-transcriptome under a cc particular biological or pathological state, and so allowing the corresponding transcriptome conjugation of tissue and pathology-specific genes such as those genes conjugation; to detect developmental specific genes such as those genes conjugation; to detect developmental specific pathological transcripts and splice variants of a man to detect RNA transcripts and splice variants of a pattent suffering condition; to detect developmental specific pathological condition; to detect deve
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New oligonucleotide libraries comprising oligonucleotides which selectively hybridize to mRNAs transcribed from a transcription a genome, useful for detecting tissue-, pathology-, and developmental-specific genes

Amplification of the CC strains and the rest of the Casp8 gene was performed in reaction and extending bisulfite treated DNA. Primers AAA51818-23 were CC designed to produce a 320 bp fragment in the upstream region of Casp8 CC gene extending from nucleotides +221 to +541. Wild type primers were CC used to amplify the corresponding region of untreated genomic DNA. CC controls without DNA were also performed. CASP8, a cysteine protease, is CC part of the death inducing signaling complex (DISC) associated with the CC fas receptor. CASP8 is inactivated in cancers, and plays a role of a CC tumour suppressor gene. The CASP8 promoter region sequences, in CC particular Region 1 and Region 2, are crucial to the design and execution CC fit be genomic methylation PCR analysis of CASP8 gene inactivation. CC Methylation PCR can be used to examine even minute amounts of patient CC material to demonstrate whether the CASP8 gene expresses an mRNA and CC protein product. The CASP8 gene has been localized to human chromosome CC 2433-34. The methods are used to diagnose or prognose cancer. Cancer is treated by administering a vector that expresses a gene encoding functional CASP8 in cells. The cancer that is diagnosed or treated is a tumour in which a may gene is amplified, such as a neuroblastoma. CC uterine cervical carcinoma and be diagnosed with the new method. A kit for screening for a compound that induces death-receptor-mediated capoptosis in cells containing an inactivated CASP8 gene is also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
